

Prescripto – Functional Expansion Roadmap

Transforming from Appointment Booking Tool to Healthcare Management Platform

Overview

Currently, Prescripto functions primarily as an appointment booking system connecting patients and doctors. While effective as a utility, it has strong potential to evolve into a comprehensive Healthcare Management Platform.

The objective of this roadmap is to expand the system from a basic booking solution into a full healthcare ecosystem that supports the complete lifecycle of patient care — from consultation to follow-up, billing, and administrative analytics.

1. Clinical Features (Doctor-Focused Enhancements)

These features enhance the doctor's workflow and align the system with real-world hospital practices.

1.1 Digital Prescription Generator

Current State:

Doctors can only mark appointments as “Completed.”

Proposed Enhancement:

Introduce a structured digital prescription form where doctors can enter:

- Medicine Name
- Dosage
- Duration
- Special Instructions / Notes

The system will automatically generate a downloadable PDF prescription for the patient.

Impact:

- Improves professionalism
- Simulates real hospital workflow

- Adds significant practical value to the consultation process
-

1.2 Electronic Health Records (EHR)

Proposed Feature:

Implement a secure “Patient History” module where doctors can access:

- Previous diagnosis notes
- Chronic conditions
- Allergy information
- Past prescriptions

Impact:

- Enables informed consultations
 - Reduces medical risk
 - Aligns with real-world healthcare standards
-

1.3 Lab Report Upload System

Proposed Feature:

Allow patients to upload:

- X-rays
- Blood test reports
- Diagnostic documents

These reports will be linked to appointments and accessible to doctors before or during consultations.

Impact:

- Enhances consultation quality
 - Improves doctor decision-making
 - Creates structured medical documentation
-

1.4 Follow-Up Scheduling System

Proposed Feature:

Enable doctors to suggest follow-up appointments directly from the consultation panel.

System functionality may include:

- Suggested follow-up date selection
- Automatic slot reservation
- Priority booking link for the patient

Impact:

- Improves patient retention
 - Creates continuity of care
 - Enhances system engagement
-

2. Patient Experience & Engagement Enhancements

These features focus on improving user trust, convenience, and engagement.

2.1 Telehealth Integration (Video Consultation)

Proposed Feature:

Add a “Join Video Call” button for online consultations using WebRTC or third-party solutions.

Impact:

- Converts system from clinic-booking tool to telemedicine platform
 - Enables remote healthcare delivery
 - Expands user reach
-

2.2 Medication Reminder System

Proposed Feature:

Based on digital prescriptions, the system can send automated reminders via:

- Email
- SMS
- Push Notifications

Example:

“Reminder: Take 500mg Amoxicillin at 2:00 PM.”

Impact:

- Improves patient compliance
 - Increases platform engagement
 - Adds real healthcare value
-

2.3 Ratings & Reviews System

Proposed Feature:

Allow only patients with completed appointments to submit reviews and ratings for doctors.

Impact:

- Builds trust
 - Encourages service quality
 - Improves transparency
-

2.4 Emergency Assistance Module

Proposed Feature:

Provide emergency support options such as:

- Nearest hospital directory (based on location)
- Emergency contact button

Impact:

- Adds patient safety feature
 - Expands healthcare ecosystem scope
-

3. Financial & Business Expansion

These features move Prescripto toward a scalable business model.

3.1 Pharmacy Integration

Proposed Feature:

After a digital prescription is generated, allow patients to:

- Send prescription to partner pharmacy
- Place order directly

Impact:

- Opens partnership opportunities
 - Enables revenue streams
 - Creates healthcare supply chain integration
-

3.2 Insurance Management Module

Proposed Feature:

Allow patients to store:

- Insurance provider details
- Policy number

Doctors or admins can verify coverage status before consultation.

Impact:

- Aligns with real healthcare systems
 - Improves financial transparency
 - Enhances credibility
-

3.3 Professional Invoicing System

Proposed Feature:

Extend existing Stripe integration to generate detailed invoices including:

- Consultation fee
- Tax breakdown
- Additional charges (e.g., lab fees)

Impact:

- Professional billing system
- Improves financial documentation

- Suitable for real-world compliance
-

4. Admin & Operational Control

These features support scalability and operational growth.

4.1 Multi-Clinic / Multi-Branch Support

Proposed Feature:

Allow the platform to manage:

- Multiple clinics
- Multiple branches
- Separate doctor assignments per clinic

Impact:

- Scalable SaaS architecture
 - Suitable for healthcare chains
 - Enterprise-ready functionality
-

4.2 Advanced Analytics Dashboard

Proposed Feature:

Provide admins with data-driven insights such as:

- Most demanded specialties
- Peak booking hours
- Doctor performance metrics
- Patient retention rates

Impact:

- Enables strategic decision-making
 - Improves business growth planning
 - Transforms system into data-driven platform
-
